## Aceclofenac (100 mg) + Paracetamol (325 mg) Tablet

---

### Description:

This combination tablet contains Aceclofenac and Paracetamol, designed to relieve pain and reduce inflammation and fever. It is particularly useful in managing acute pain and inflammatory conditions such as arthritis, osteoarthritis, dental pain, and musculoskeletal disorders.

---

### Composition and Mechanism of Action:

1. **Aceclofenac (100 mg):** A nonsteroidal anti-inflammatory drug (NSAID) that inhibits the cyclooxygenase (COX) enzymes, reducing the production of prostaglandins, which are chemicals responsible for pain, fever, and inflammation.
  2. **Paracetamol (325 mg):** Acts as an analgesic (pain reliever) and antipyretic (fever reducer) by inhibiting the synthesis of prostaglandins in the central nervous system, which decreases pain sensation and fever.
- 

### Indications:

This combination tablet is indicated for the relief of:

- Musculoskeletal pain, including back pain, joint pain, and soft tissue injuries
  - Pain and inflammation in conditions like osteoarthritis, rheumatoid arthritis, and ankylosing spondylitis
  - Postoperative pain and dental pain
  - Mild to moderate fever
- 

### Dosage and Administration:

- **Adults:** One tablet every 8 to 12 hours as required or as directed by a healthcare provider. Do not exceed three tablets in a 24-hour period.
- **Route of Administration:** Oral, to be taken with a glass of water.
- **Timing:** Preferably after meals to reduce the risk of gastric irritation.

**Note:** The dosage may vary based on the severity of symptoms and the individual patient's response. Always follow your doctor's instructions.

---

### Precautions and Warnings:

1. **Alcohol:** Avoid alcohol consumption as it can increase the risk of liver toxicity (due to Paracetamol) and enhance gastric side effects.
  2. **Pregnancy and Breastfeeding:** Use only if prescribed by a healthcare provider, as certain ingredients may not be safe during pregnancy or breastfeeding.
  3. **Underlying Health Conditions:** Use with caution in patients with liver or kidney impairment, gastrointestinal disorders (e.g., peptic ulcer), asthma, and cardiovascular issues.
  4. **Driving and Operating Machinery:** This medication may cause dizziness; avoid activities requiring alertness if affected.

If serious side effects occur, discontinue use and seek medical attention immediately.

---

## Drug Interactions:

- **Blood Thinners:** Aceclofenac may enhance the effects of anticoagulants, increasing bleeding risk.
