

Bringcetam 100

Brivaracetam 100mg Tablet

Advanced Antiepileptic Medication for Partial-Onset Seizures

Composition (Per Tablet):

- **Brivaracetam I.P.** – 100mg

Product Overview:

Brivaracetam is a **potent and selective antiepileptic drug (AED)** used in the treatment of **partial-onset seizures** in patients with epilepsy. It works by targeting the **synaptic vesicle protein 2A (SV2A)**, **modulating neurotransmitter release**, and **reducing abnormal neuronal excitability**.

This **high-dose formulation (100mg)** is commonly prescribed for patients requiring **stronger seizure control** and can be used as **monotherapy or adjunctive therapy** alongside other antiepileptic drugs.

Key Benefits:

- **Highly effective in reducing partial-onset seizures**
- **Fast-acting and selective SV2A ligand** for targeted seizure control
- **Minimal drug interactions**, making it suitable for combination therapy
- **Lower sedation risk compared to traditional antiepileptics**
- Improves **quality of life by reducing seizure frequency and severity**

How It Works:

Brivaracetam binds to **synaptic vesicle protein 2A (SV2A)** in the brain, helping regulate neurotransmitter release. This **reduces hyperexcitability in neurons**, preventing seizures from occurring.

Indications:

- **Partial-onset seizures** in epilepsy patients (aged 16 years and above)
- **Adjunct therapy** for improved seizure control
- **Monotherapy** for selected epilepsy cases

Dosage & Administration:

- **Standard Adult Dose:** 100mg **once or twice daily** (total 100-200mg/day)
- **Dosage Adjustments:** Can be increased up to **200mg/day** based on patient response and doctor's advice
- **Take with or without food**
- **Swallow whole with water; do not crush or chew**

Precautions & Warnings:

- May cause **drowsiness, dizziness, or fatigue**; avoid driving or operating heavy machinery
- Caution in patients with **liver or kidney impairment**
- Do not discontinue abruptly; sudden withdrawal may increase seizure risk
- Use with caution in individuals with a history of **psychiatric conditions or suicidal thoughts**
- Avoid alcohol consumption, as it may enhance sedative effects

Side Effects (Generally Mild & Well-Tolerated):

- Drowsiness or fatigue
- Dizziness or vertigo
- Nausea or gastrointestinal discomfort
- Mood changes or irritability (rare)

Storage Instructions:

- Store in a **cool, dry place**, away from direct sunlight
 - Keep out of reach of children
 - Do not refrigerate or freeze
-

Why Choose This Product?

- **Clinically proven for epilepsy management**
- **Fast-acting and highly selective SV2A ligand**
- **Minimal drug interactions** compared to older AEDs
- **Effective in seizure control with better tolerability**

For best results, **follow the prescribed dosage** and consult your doctor for personalized epilepsy management. If any unusual side effects occur, seek medical attention promptly.
