when it is needed the most

- A combination drug primarily used to reduce abdominal pain caused due to dysmenorrhea (irregular periods/menses).
- Camylofin is an anti-cholinergic which relaxes the muscles in the stomach and gut (intestine) and stops sudden muscle contractions (spasms).
- Paracetamol is an analgesic and an anti-pyretic which works by blocking the release of certain chemical messengers that causes fever and pain.
- It relieves cramps, pain, bloating and discomfort.
