Cefixime Trihydrate I.P 200mg + Sulbactam I.P. 150mg Tablets

- This combination is effective against a wide range of bacteria, addressing diverse infections.
- Sulbactam acts as a beta-lactamase inhibitor, which helps prevent bacteria from deactivating cefixime, thus increasing its effectiveness.
- It's prescribed for infections like respiratory tract infections, urinary tract infections, skin and soft tissue infections, and certain intra-abdominal infections.
- The addition of sulbactam helps to combat bacterial resistance, making the cefixime more effective against resistant strains.

Indication In :

Respiratory infections

Urinary tract infections

Skin/soft tissue infections

Intra-abdominal infections
