Clobquin Cream

Clobquin Cream

Composition:

Each gram contains:

- **Clobetasol Propionate I.P.** – 0.05% w/w
- In a cream base – q.s.

Description:

Clobquin Cream is a potent topical corticosteroid indicated for the treatment of various dermatological conditions responsive to corticosteroids. Clobetasol Propionate acts as an anti-inflammatory, antipruritic, and vasoconstrictive agent.

Indications:

- Psoriasis
- Eczema
- Lichen planus
- Seborrheic dermatitis
- Contact dermatitis
- Other corticosteroid-responsive dermatoses

Dosage and Administration:

Apply a thin layer to the affected area once or twice daily or as directed by the physician. Do not use for more than 2 consecutive weeks without medical supervision.

Contraindications:

- Hypersensitivity to corticosteroids
- Viral, fungal, or bacterial skin infections
- Rosacea, acne vulgaris, perioral dermatitis
- Children under 12 years unless directed by physician

Precautions and Warnings:

- For external use only. Avoid contact with eyes, mucous membranes, and open wounds.
- Long-term use may cause skin thinning, striae, or systemic absorption.
- Not to be used under occlusive dressings unless advised.
- Discontinue if irritation or hypersensitivity develops.

Adverse Effects:

Burning, itching, irritation, dryness, folliculitis, secondary infection, skin atrophy, striae.

Storage:

Store in a cool and dry place below 25°C.

Keep the tube tightly closed.

Keep out of reach of children.
