Ebatyle

Ebatyle M Ebastine (10mg) + Montelukast (10mg) **Tablets**

Ebatyle 10 Ebastine (10mg) **Tablets**

Ebatyle 20 Ebastine (20mg) **Tablets**

Ebastine

- Ebastine have advantages over cetirizine 10 mg, in terms of a reduced time to achieve maximal efficacy and a superior level of efficacy in patients with more severe symptoms.

Ebastine 10 or 20mg (79 to 85%) is more effective than loratadine 10mg (65 to 66%) for the treatment of PAR (Perennial allergic rhinitis).

- Ebastine treatment increasing IFN-gamma production which is indicator of clinical immunological improvement.

- **Montelukast Sodium**

Montelukast is a leukotriene antagonist

It blocks the action of leukotriene, a chemical messenger.

This reduces inflammation (swelling) in the airways to prevent asthma and relieve symptoms of allergies.

In

Asthma

Allergic Rhinitis

Runny Nose

Idiopathic Chronic Urticaria
