

Flutialfa S 125 Inhaler

Salmeterol (25mcg) + Fluticasone Propionate (125mcg) Inhaler

Product Description

The Salmeterol (25mcg) + Fluticasone Propionate (125mcg) Inhaler combines two effective medications to provide long-term relief for individuals suffering from asthma and chronic obstructive pulmonary disease (COPD). Salmeterol, a long-acting beta-agonist (LABA), helps to relax the muscles in the airways, making it easier to breathe. Fluticasone Propionate, a corticosteroid, works to reduce inflammation and swelling in the airways, preventing asthma attacks and exacerbations of COPD. Together, these medications provide both immediate and lasting relief from respiratory symptoms.

Key Features

- **Dual Action Formula:** Combines Salmeterol for bronchodilation and Fluticasone Propionate for anti-inflammatory effects.
- **Long-Lasting Relief:** Provides up to 12 hours of relief from symptoms such as wheezing, shortness of breath, and coughing.
- **Improves Lung Function:** Helps to open airways and reduce airway inflammation, improving overall lung function.
- **Easy-to-Use Inhaler:** Convenient and portable inhaler for fast and efficient delivery of medication directly to the lungs.
- **Prevents Asthma Attacks:** Ideal for preventing symptoms and flare-ups, ensuring better control of asthma and COPD.

Indications

This inhaler is used for the treatment and maintenance of:

- **Asthma:** To prevent asthma attacks and manage chronic asthma symptoms.
- **Chronic Obstructive Pulmonary Disease (COPD):** For long-term management and prevention of COPD exacerbations.

- **Exercise-Induced Bronchoconstriction:** To help prevent narrowing of the airways triggered by physical activity.

How It Works

- **Salmeterol (25mcg):** A long-acting beta-2 adrenergic agonist that works by relaxing the muscles in the airways, helping to open up the airways and make it easier to breathe. It provides bronchodilation and helps prevent bronchospasm for up to 12 hours.
- **Fluticasone Propionate (125mcg):** A corticosteroid that reduces inflammation and swelling in the airways, preventing asthma attacks and reducing airway hyperresponsiveness. It helps manage chronic inflammation associated with asthma and COPD.

Dosage and Administration

- **Adults and Children (12 years and older):**
 - Inhale one puff (25mcg Salmeterol and 125mcg Fluticasone Propionate) twice daily, or as prescribed by your doctor.
- **Children (6-11 years):**
 - The dosage should be adjusted based on the doctor's recommendation.

How to Use the Inhaler:

1. Shake the inhaler well before use.
 2. Breathe out fully to empty your lungs.
 3. Place the mouthpiece in your mouth and close your lips around it.
 4. Press down on the inhaler to release the medication while inhaling deeply.
 5. Hold your breath for 10 seconds to ensure the medication reaches your lungs.
 6. If needed, repeat for a second puff after waiting 30 seconds.
-

Precautions

- **Not for Relief of Acute Symptoms:** This inhaler is for regular use and maintenance, not for immediate relief during an asthma or COPD attack. Use a fast-acting bronchodilator for sudden symptoms.
 - **Consult a Doctor:** Before starting this medication, inform your doctor about any history of heart problems, high blood pressure, thyroid issues, diabetes, or other medical conditions.
 - **Monitor for Side Effects:** Prolonged use of corticosteroids may increase the risk of side effects such as oral thrush, hoarseness, or changes in bone density.
 - **Pregnancy and Breastfeeding:** Consult your doctor before using during pregnancy or while breastfeeding.
-

Side Effects

Common side effects may include:

- Hoarseness or throat irritation
- Oral thrush (fungal infection in the mouth)
- Headache
- Cough or dry mouth
- Increased heart rate or palpitations

Serious side effects are rare but may include signs of allergic reactions, such as rash, swelling, or difficulty breathing. Contact your doctor immediately if any severe side effects occur.

Storage Instructions

- Store in a cool, dry place, away from direct sunlight and moisture.
 - Keep the inhaler tightly closed when not in use.
 - Keep out of reach of children.
-

Why Choose Salmeterol (25mcg) + Fluticasone Propionate (125mcg) Inhaler?

This combination inhaler offers an effective, long-term solution for managing asthma and COPD. By

addressing both bronchospasm and inflammation, it provides comprehensive symptom control and helps prevent flare-ups. Its user-friendly design ensures consistent, reliable delivery of medication, improving quality of life for individuals with chronic respiratory conditions.

Important Note: Always follow your doctor's instructions on usage and dosage. Regular monitoring of lung function is recommended for optimal treatment.
