

## Laxatyle Solution 100ml

### Lactulose 15ml Syrup (Lactulose Concentrate 66.7% in 6gm) | Laxative Solution for Constipation Relief & Liver Health

#### Composition:

Each **15ml** of syrup contains:

- **Lactulose Concentrate 66.7% in 6gm**
- **Flavored Syrup Base** to enhance taste and ensure patient compliance

#### Segment:

Gastrointestinal / Laxative

#### Brand Name:

(Provide brand name if available)

### Indications and Uses

#### Primary Indications:

- Used for the treatment of **chronic and occasional constipation** by softening stool and promoting natural bowel movements.

#### Secondary Indications:

- **Hepatic Encephalopathy** – Helps in reducing high ammonia levels in patients suffering from **liver diseases** such as cirrhosis, thereby preventing complications like confusion and cognitive impairment.
- **Gut Health Support** – Acts as a **prebiotic**, promoting the growth of beneficial bacteria while suppressing harmful bacteria in the intestine.
- **Post-Surgical and Elderly Care** – Recommended for patients with limited mobility, post-surgical recovery, or aging-related digestive issues who require a gentle laxative for regular bowel movements.

### Mechanism of Action

Lactulose is a **synthetic disaccharide laxative** that works by **drawing water into the colon**, softening stool, and stimulating bowel movements. It is **not absorbed in the stomach or small intestine** but is metabolized by colonic bacteria, leading to acidification of intestinal contents. This action helps in increasing **stool water content**, easing defecation.

In patients with **hepatic encephalopathy**, lactulose plays a vital role in reducing **blood ammonia levels**. It facilitates the conversion of **ammonia into ammonium**, which is excreted through stools, thereby helping to manage symptoms of liver dysfunction.

### Key Benefits

- **Effective and Gentle Laxative** – Provides natural stool softening and promotes regular bowel movements without causing dependence.
- **Flavored Syrup Base** – Enhances taste for better patient acceptance, particularly for pediatric and elderly patients.
- **Safe for Long-Term Use** – Can be used under medical supervision for managing chronic constipation.
- **Supports Liver Detoxification** – Helps in reducing the accumulation of toxins in patients with liver disease.
- **Prebiotic Properties** – Encourages the growth of beneficial gut bacteria, improving overall digestive health.

### Dosage and Administration

*For Constipation:*

- **Adults and Adolescents (12 years and above):** 15 to 30ml once daily, adjusted as per response.
- **Children (1 to 6 years):** 5 to 10ml per day.
- **Infants (under 1 year):** 2.5 to 5ml per day.

*For Hepatic Encephalopathy:*

- **Adults:** 30 to 45ml three times daily, adjusted as needed to produce **two to three soft stools per day**.

The dosage may vary based on **individual patient needs** and should be taken as advised by a healthcare professional. It is recommended to consume the syrup with sufficient water.

---

## Storage and Safety Information

- Store in a **cool and dry place**, away from direct sunlight.
- Shake well before use to ensure uniform consistency.
- Not recommended for patients with **galactosemia** or those with lactose intolerance.
- Diabetic patients should use the syrup with caution as it contains **sugar**.
- Long-term use should be **under medical supervision**, especially for individuals with underlying health conditions.

---

## Manufacturing and Pharma Opportunities

Lactulose 15ml Syrup is manufactured under **WHO-GMP certified** standards, ensuring **high quality, safety, and efficacy**. It is widely available for:

- **PCD Pharma Franchise**
- **Third-Party and Contract Manufacturing**
- **Bulk Supply for Pharma Export**

The product is suitable for companies looking for **reliable, high-quality laxative formulations** to add to their **gastrointestinal product portfolio**.
