

When lots of inflammation & Pain sets in...

Loxifrit **P**

Lornoxicam (8mg) + Paracetamol (325mg) Tablets

- It is more effective than diclofenac in early period in renal colicky Pain
- It is as effective as Tramadol in Post Operative Pain and reduces the requirement of Opioids Analgesics
- Anti Inflammatory and antipyretic effects of lornoxicam include prevention of the degeneration bone loss seen in chronic inflammation
- Combination of Paracetamol and an NSAID offers superior analgesia compared with either drug alone

In.

Osteoarthritis

Ankylosing Spondylitis

Chronic Back Pain

Disk Prolapse

Acute Post operative Pain
