

Piffcam Injection

Piroxicam 20 mg Injection

Non-Steroidal Anti-Inflammatory Drug (NSAID)

Description

Piroxicam 20 mg Injection is a non-steroidal anti-inflammatory drug (NSAID) used for the rapid relief of **pain and inflammation** associated with various musculoskeletal conditions. It is particularly effective in treating acute episodes of arthritis, joint pain, and post-operative pain. This injectable form ensures **fast action** and **immediate symptom relief** when oral administration is not feasible.

Mechanism of Action

- **Inhibits Prostaglandin Synthesis:** Piroxicam works by inhibiting the **cyclooxygenase (COX)** enzymes, reducing the production of prostaglandins, which are chemicals responsible for pain, inflammation, and swelling.
 - **Anti-Inflammatory, Analgesic, and Antipyretic Effects:** Provides comprehensive relief from pain, inflammation, and fever.
-

Indications

- **Rheumatoid Arthritis**
 - **Osteoarthritis**
 - **Acute Gout**
 - **Ankylosing Spondylitis**
 - **Post-Traumatic Pain and Inflammation**
 - **Post-Operative Pain Management**
 - **Musculoskeletal Disorders** (such as sprains, strains, and back pain)
-

Dosage and Administration

- **Dose:**
 - Typically, **20 mg (1 mL)** administered **intramuscularly (IM)** once daily.
 - Dosage may vary based on the severity of the condition and medical advice.
 - **Route:**
 - For **deep intramuscular injection** only. Avoid intravenous (IV) administration.
 - **Duration:**
 - Short-term use only; prolonged use should be avoided unless specifically advised by a healthcare professional.
-

Benefits

- **Rapid Onset of Action:** Provides quick relief from pain and inflammation.
 - **Alternative to Oral NSAIDs:** Suitable for patients unable to take oral medications.
 - **Convenient Dosing:** Once-daily administration for effective symptom control.
-

Precautions

- **Gastrointestinal Risks:** May cause irritation or bleeding in the stomach lining; caution in patients with a history of ulcers or gastrointestinal bleeding.
 - **Cardiovascular Caution:** Avoid in patients with recent heart conditions, as NSAIDs can increase the risk of heart attack or stroke.
 - **Renal Function:** Use cautiously in patients with kidney impairment.
 - **Liver Function:** Regular monitoring is advised in long-term use.
 - **Pregnancy & Breastfeeding:** Avoid unless prescribed by a healthcare provider.
 - **Drug Interactions:** Inform your doctor about all medications, especially anticoagulants, other NSAIDs, and diuretics.
-

Possible Side Effects

- **Common:**
 - Pain at the injection site
 - Nausea or vomiting
 - Dizziness
 - Headache
- **Serious:**
 - Stomach ulcers or bleeding
 - Elevated blood pressure
 - Kidney dysfunction
 - Allergic reactions (rash, swelling, or difficulty breathing)

If severe side effects occur, discontinue use and seek medical attention immediately.

Storage

- Store below 25°C.
 - Protect from light and moisture.
 - Keep out of reach of children.
-
